

Find the Right Flange Fit

Why is finding the right flange size important?
Not using the right flange size for you can:

cause discomfort while pumping,

Reduction in milk output

ComfortFit® Flanges come in 2 sizes: Standard and Large.

Standard
Fits most moms

Large

Breast Anatomy

The nipple is the portion of your breast that protrudes out.

The areola is the darker area around the nipple.

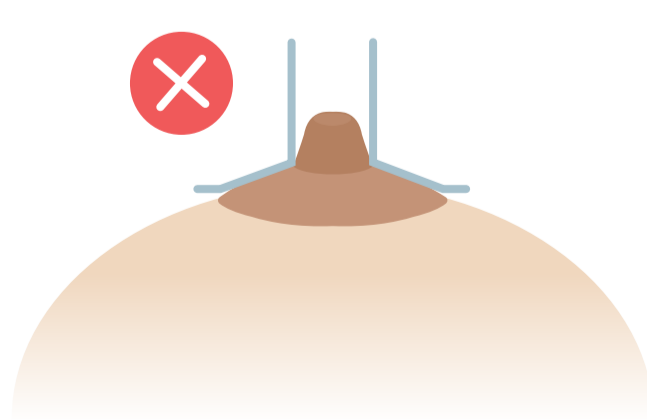

How do I know if my flange is fitting me correctly?

Too large

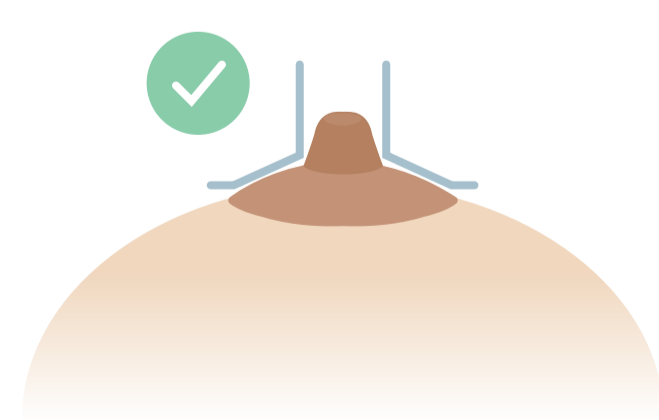

A large portion of your areola is pulled into the tunnel and you may feel pain.

Too small

Your nipples touch or rub along the sides of the tunnel.
A feeling of pinching or soreness in the nipple when pumping.
Your nipple may be misshapen when you finish pumping.

Good fit

Only your nipple and a small portion of your areola should be drawn into the flange tunnel when you are pumping.
